Installing VPN on your iphone or ipad

Open the App Store and Search for “OpenVPN Connect”. You will need to download “OpenVPN Connect” as shown on the right.	Once the App is downloaded open the app and just click on Access Server.	
Next you will need to fill in the details as per the below. **Access Server Hostname** – freedomvpn.verticalsystems.co.uk **Title** – Can be anything, it will have your username automatically entered **Port** – Please leave blank **Username** – This should be the Number that was provided to you **Password** – Please enter the password provided on the email **Please tick "Import Autologin Profile"** Once this is entered Please click add in the top right of the screen.	Once you click add your phone will ask you to confirm if this app is allowed to make a VPN configuration. Please click allow.	
Click on the Account to login and it will Automatically login. After connecting your phone will ask if you would like the app to enable a VPN Connection. Please click Yes.	This should now be connected. Next time you need to connect you should be able to just load the app and click on the switch to login.
